

UpSOL

Connecting NFT to scheduled actions
for **ecommerce automation**

You want to upsale? upSOL !

send **NFT** based on ecommerce events thanks to automations and
create loyalty programs on your store and **grow your business**.

Introduction

Introducing our revolutionary product, designed to provide a strong and secure API layer for affiliate NFT drop.

Our API layer ensures that all transactions are executed seamlessly, while also providing robust security features to protect the integrity of the data.

Trust and security are our top priorities, and our product is designed to deliver just that, making it the ideal choice for anyone looking to leverage the power of NFTs in their affiliate marketing strategy.

Currently run on **DEVNET**

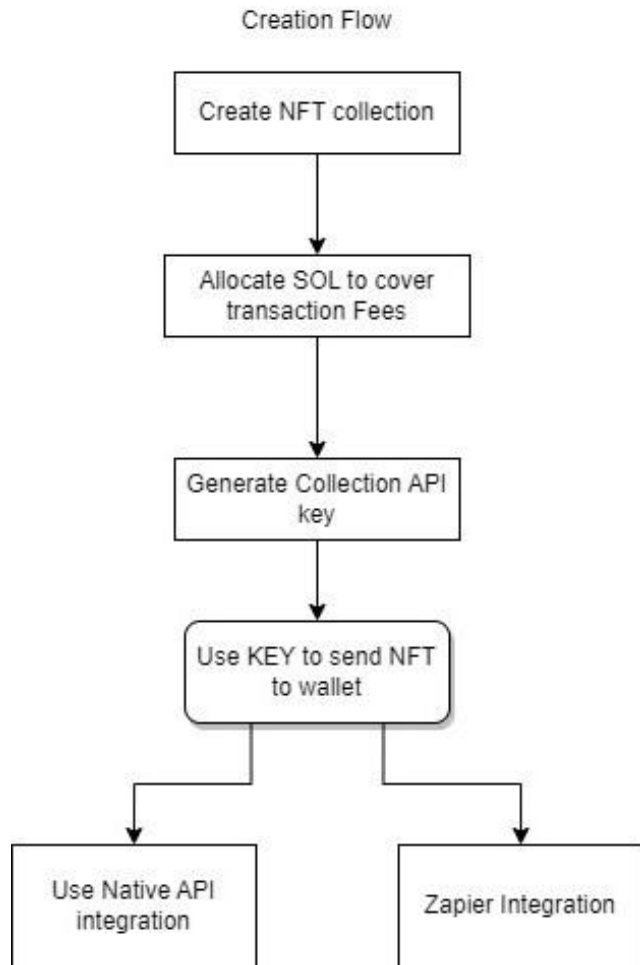

How it's work

zapier upSQL integration listen for triggers..

Send NFT to address passed throw ZAP flows

Manage NFT auth on third party integration

The receiver could use the NFTs as authenticator for multiple services such as ecom product discount or platform logins

Workflows in Zapier

Create different workflows based on same inputs:

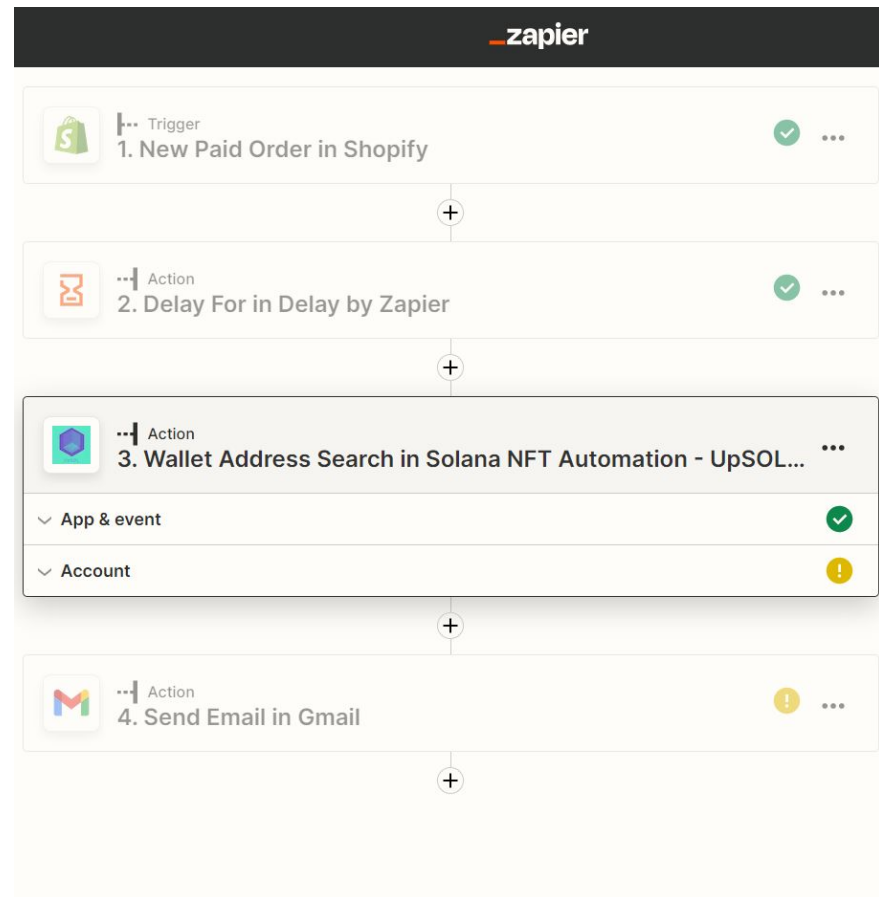

Use API key to authenticate

example:

New Order form shopify

Csv file rows

....

API integration

Possible to integrate in your app

Fully simple REST API :

POST collection/create → **CREATE NFT COLLECTION - GENERATE API-Key**

GET collection/validate → **NFT COLLECTION STATUS**

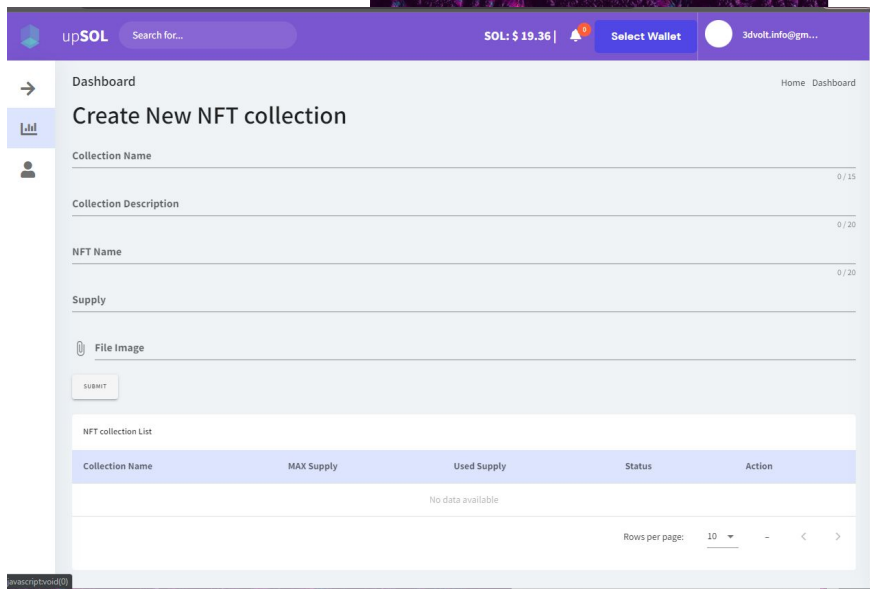

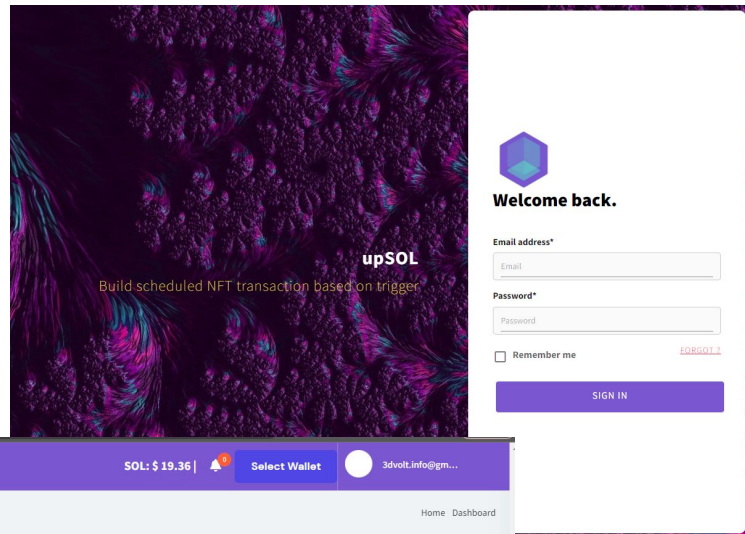

POST collection/send → **SEND NFT to Wallet Address**

Webapp overview

To demonstrate the workflow instead of using API you could create your collection on webapp

upsol.app

Possible Use Cases
